

GO Vertical is a specialist consultancy supporting feature films, high-end television, commercials and factual productions with location safety, technical access and remote operations in challenging environments throughout the UK and internationally.

### **Helping productions work safely where access is challenging.**

We help productions access, operate and film safely in locations where conventional solutions are not enough. Whether supporting a remote mountain location, coastal filming, quarry operations, technical rigging or equipment movement, we work alongside production teams to develop practical solutions that enable filming to take place safely and efficiently.

Led by Matthew Jones (TechIOSH, MCI), GO Vertical combines over twenty years of international operational experience with a multidisciplinary team of highly qualified professionals including Mountaineering & Climbing Instructors, IRATA Level 3 Technicians, Rescue 3 Instructor Trainers, Rope Rescue Team Leaders, mountain rescue personnel, water safety professionals and experienced location safety consultants.

**We believe good safety enables great work.**

## PROJECT HIGHLIGHTS

### The Gorge

Designed and operated a tensioned highline system enabling the safe movement of crew and production equipment to an otherwise inaccessible coastal filming location while maintaining emergency rescue capability.

---

### House of the Dragon

Provided steep ground safety, technical access and construction support, working collaboratively with production departments in complex terrain.

---

### Anemone

Delivered integrated coastal safety, water safety and remote communications for filming in a dynamic marine environment.

Supporting remote operations in mountainous terrain, Oman.
